Allendale Oral Health Stats*

Water Fluoridation

- 4 public water systems serve Allendale County
- Currently, all Fluoridate **BELOW** levels recommended by the CDC
- Fluoridation is the single most effective public health measure to prevent tooth decay

Dental Cavities

- 69.57% of children screened had either past or present cavities
- Dental cavities are the most common chronic childhood disease, **5x more common** than asthma.
- Cavities are preventable and can lead to severe health problems

Early Intervention

- Babies should have 1st screening by 1 y/o
- Sign-up school-age children for school-based dental programs
- Establish a dental home for children **EARLY**

*data derived from 2022-2023 Oral Health Needs Assessment
