

Fact Sheet

South Carolina Department of Public Health – www.dph.sc.gov

2024 HIV/AIDS summary: Pee Dee Public Health Region

New HIV infections (including AIDS cases), 2022-2023

Pee Dee Public Health Region includes twelve counties: Chesterfield, Clarendon, Darlington, Dillon, Florence, Georgetown, Horry, Lee, Marion, Marlboro, Sumter, and Williamsburg.

HIV in the Pee Dee Public Health Region (PHR) For the two-year period 2022-2023, 337 people were newly diagnosed with HIV. This represents 21 percent of the total cases diagnosed in South Carolina.

By gender assigned at birth, 74 percent of new HIV/AIDS cases occur among men; 26 percent were among women. All references to women and men in this fact sheet indicate gender assigned at birth.

By age, the greatest proportion of new HIV/AIDS cases were among people ages 20-29 (32 percent), 25 percent were among people ages 30-39, 16 percent were among people ages 40-49, and 21 percent were age 50 and up. Six percent of new cases were under the age of 20.

By risk, among the 161 people who reported a risk, men who have sex with men (MSM) represent the largest proportion of recent infections (88 percent), followed by those who inject drugs (IDU) (seven percent); two percent were people indicating heterosexual sex as their exposure to HIV; and three percent were the combined risk of MSM and IDU.

By race/ethnicity, among people newly diagnosed with HIV/AIDS in the Pee Dee PHR, 57 percent were African American; 26 percent were white; and seven percent were Hispanic. In 2022-2023, African Americans had 2.2 times the cases than whites in the Pee Dee PHR.

Among women recently diagnosed with HIV/AIDS in the Pee Dee PHR, most were African American (54 percent); 35 percent were White; and four percent were Hispanic. Of the eight women reporting risk, 75 percent were people who inject drugs; 25 percent indicated heterosexual sex as their exposure to HIV.

Among men recently diagnosed in the Pee Dee PHR, 59 percent were African American; 24 percent were white; and nine percent were Hispanic. Of the 149 men reporting risk, 93 percent were men who have sex with men, one percent were exposed through heterosexual sex; three percent were people who inject drugs; and three percent were both MSM and IDU.

New HIV/AIDS cases diagnosed in S.C. Pee Dee Public Health Region

Total People Living with HIV/AIDS through December 2023

As of December 2023, there were 4,529 residents of the Pee Dee Public Health Region living with a diagnosis of HIV (including AIDS). This represents 22.5 percent of the S.C. total. Of these, 3,084 were men and 1,445 were women. Most people (2,485) were ages 50 and over; 854 were ages 40-49; 805 were ages 30-39; 341 were ages 20-29; and 44 were children and teens under 20 years of age.

As with new infections, African Americans are disproportionately impacted. Most of the people living with HIV in the Pee Dee Public Health Region were African American men (44 percent), 19 percent were White men, 24 percent were African American women, and six percent were White women. Six percent of people living with HIV were Hispanic/Latino (men & women).

Of 3,285 people living with HIV who reported a risk, 54 percent reported a risk of men who have sex with men; followed by men and women exposed through heterosexual sex (33 percent); people who inject drugs (eight percent); and the combined risk of men who have sex with men and people who inject drugs (three percent).

S.C. HIV Prevention Program Priority Populations

Care, treatment and prevention services for persons living with HIV/AIDS are a top priority for the State of South Carolina's HIV Program.

Among remaining priority populations for HIV prevention services:		
S.C. HIV Prevention Program Priority Populations ^(1,2)	2022/2023 Diagnosed HIV/AIDS Cases by Population % of Total Cases w/Risks Identified (173 Total) *	People Living with HIV/AIDS, 2023 By Population % of Total Cases w/Risks Identified (3,361 Total)
2. African American MSM	49%	30%
3. African American WSM	1%	16%
4. African American MSW	1%	8%
5. White MSM	19%	17%
6. IDU	6%	8%
7. ♦Hispanic/Latino ³	14%	7%

*Caution: Due to small numbers, must interpret recent case proportions with caution.

NOTES:

1. Populations: MSM = Men who have Sex with Men; IDU = Injection Drug User; WSM = Women who have Sex with Men; MSW = Men who have Sex with Women.
2. Priority Populations are a subset of the Epi Profile data and are not directly comparable to incidence and prevalence counts/percentages.
3. Ethnicity, in and of itself, is not a risk factor for HIV; however, in the context of Priority Populations, Hispanic/Latino is included as a 'Risk' for reporting purposes.
