

SOUTH CAROLINA TEEN PREGNANCY DATA BOOK 2013-2023

**VOLUME III
ANNUAL VITAL STATISTICS SERIES**

**Vital Statistics
South Carolina Department of Public Health**

May 2025

Introduction

Teen pregnancy events in the lives of South Carolina residents over the past decade are documented in this report. More data are available on SCAN: [SCANDPH Home Page](#).

Since 2011, SC teen pregnancy data has been presented for four commonly requested age groups of adolescents: 10-19, 15-17, 18-19 and 15-19.

The Office of Vital Statistics collects data on pregnancy events (live births, abortions and reportable fetal deaths). South Carolina law requires this data to be reported to SCDHEC. Live births, fetal deaths and abortions occurring out-of-state to South Carolina residents are also included in this report. Event information is re-allocated to the state of residence through an agreement of interstate transcript exchange. Therefore, the statistics presented should be representative of live births, abortions, and fetal deaths among SC residents.

In this report, reported pregnancies are defined as the number of live births plus the number of abortions plus the number of reportable fetal deaths.

Reported pregnancies = live births + abortions + fetal deaths

A fetal death is required to be reported if the fetus has completed or passed the twentieth week of gestation or weighs 350 grams or more.

The National Center for Health Statistics provides population estimates. Inter-censal population should be recognized as estimates. Population of 2021 and moving forward is based on U.S. census population estimates.

Definition of Terms

Abortion: Purposeful termination of pregnancy with intention other than to produce a live born infant or to remove a dead fetus.

Age of Mother: The age of the mother in years at her last birthday.

Reported Pregnancy: The number of live births plus the number of abortions plus the number of reportable fetal deaths.

Fetal Deaths: Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction, the fetus does not breath or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles. A fetal death is required to be reported if the fetus has completed the twentieth week or more of gestation or weighs 350 grams or more. **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

Live Birth: The complete expulsion or extraction of a product of human conception from its mother, irrespective of the duration of pregnancy, which after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

Marital Status:

Unmarried: A woman who has never been married or who has been widowed or legally divorced in excess of 280 days.

Married: A woman who is married or has been married within 280 days from conception.

Paternity Acknowledgement: Gives authorization to list the name of the father by means of an affidavit as required by South Carolina Law, Section 44-63-165. For statistical purposes, paternity acknowledgements are included in the unmarried category.

Residence Data: Data allocated to the place in South Carolina where the person normally resides, regardless of where the event occurred.

Interpretation of Data

Rate Calculations with Small Numbers: There are variations in all statistics, which are the result of chance. This characteristic is of particular importance in classifications with small numbers of events where small variations are proportionately large in relation to the base figure.

Race: Information on race of the mother and father is reported on birth and fetal death certificates, and the race of the woman is reported on the abortion form. For statistical purposes, the tables in this report are based on the classification of "White" and "Black and Other". Blacks currently make up 95 percent of Black and Other Population of South Carolina. To be consistent with the National Center for Health Statistics (NCHS) and with other states, the Office of Public Health Statistics and Information Services of the South Carolina Department of Health and Environmental Control began utilizing the race of the mother for births in 1990. Abortions and fetal deaths are characterized by the race of the woman for all reported years.

Fetal Death Rates: Beginning in 1993, the fetal death rate calculations were changed to the formula recommended by NCHS, which includes fetal deaths plus live births in the denominator. Due to this change, the rates reported in this series will not be identical or comparable to rates reported in previous volumes.

POPULATION DATA: For inter-census years, the National Center for Health Statistics provide estimated population data for South Carolina for five-year age groups. Based on the assumption that the population within each of these age categories is distributed uniformly throughout the age interval, the population for females 15-17 and 18-19 years is derived, respectively, as follows: 60% of the female population 15-19 and 40% of the female population 15-19. For this publication, the 2000 population data are determined in the same manner as the estimates, thereby, providing a consistent method of deriving population information for these age groups over time. The population data presented in the tables are rounded to the nearest 10.

Beginning with the 2000 Census, population information released by the U.S. Census Bureau contained a 'multiple' race category. In order to provide rates by single race category for vital events, the National Center for Health Statistics (NCHS) developed a 'bridging' methodology that would regroup the populations of the 'multiple' race category into standard single race categories. Beginning with 2002, these 'bridged' estimated population data were available for South Carolina. For a description of these methodologies, please refer to the 'Technical Notes' Section of the corresponding annual publication of the South Carolina Vital and Morbidity Statistics, Volume I.

The NCHS discontinued producing the bridged race population estimates in 2020 because all the jurisdictions had revised their birth and death certificates to be compliant with the 1997 OMB standards by 2018. The office of Vital Statistics of South Carolina has reached an agreement with U.S. Census of receiving the single race by single year population estimates since 2021 for vital rates calculation. Under this agreement, the county level population estimates are not permitted to be published.
