

Fact Sheet

South Carolina Department of Public Health – www.dph.sc.gov

2025 HIV/AIDS summary: Pee Dee Public Health Region

New HIV infections (including AIDS cases), 2023-2024

Pee Dee Public Health Region includes twelve counties: Chesterfield, Clarendon, Darlington, Dillon, Florence, Georgetown, Horry, Lee, Marion, Marlboro, Sumter, and Williamsburg.

HIV in the Pee Dee Public Health Region (PHR) For the two-year period 2023-2024, 350 people were newly diagnosed with HIV. This represents 22 percent of the total cases diagnosed in South Carolina.

By sex assigned at birth, 75 percent of new HIV cases were among men; 25 percent were among women. All references to women and men in this fact sheet indicate sex assigned at birth.

By age, the greatest proportion of new HIV cases were among people ages 20-29 (33 percent), 22 percent were among people ages 30-39, 16 percent were among people ages 40-49, and 25 percent were age 50 and up. Five percent of new cases were under the age of 20.

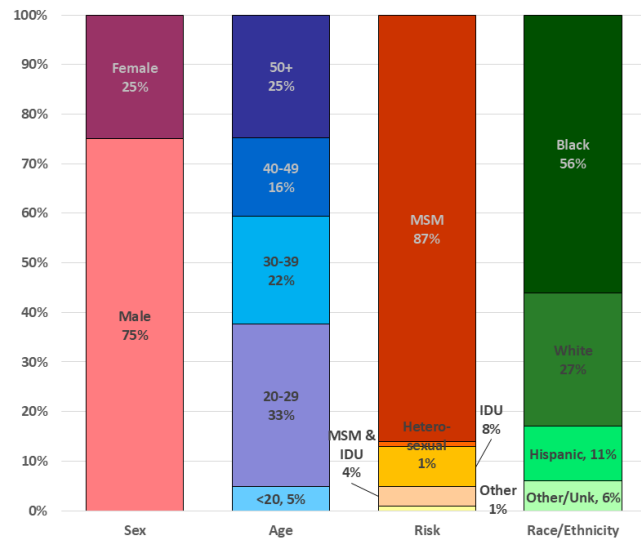

By risk, among the 151 people who reported a risk, men who have sex with men (MSM) represent the largest proportion of recent infections (87 percent), followed by those who inject drugs (IDU) (eight percent); one percent was people indicating heterosexual sex as their exposure to HIV; and four percent were the combined risk of MSM and IDU.

By race/ethnicity, among people newly diagnosed with HIV in the Pee Dee PHR, 56 percent were African American; 27 percent were white; and 11 percent were Hispanic. In 2023-2024, African Americans had 2.1 times the cases than whites in the Pee Dee PHR.

Among women recently diagnosed with HIV in the Pee Dee PHR, most were African American (49 percent); 39 percent were White; and six percent were Hispanic. Of the 11 women reporting risk, 100 percent were people who inject drugs and none indicated heterosexual sex as their exposure to HIV.

Among men recently diagnosed in the Pee Dee PHR, 59 percent were African American; 22 percent were white; and 12 percent were Hispanic. Of the 138 men reporting risk, 92 percent were men who have sex with men, one percent was exposed through heterosexual sex; two percent were people who inject drugs; and four percent were both MSM and IDU.

New HIV cases diagnosed in SC Pee Dee Public Health Region

Total People Living with HIV through December 2024

As of December 2024, there were 4,575 residents of the Pee Dee Public Health Region living with a diagnosis of HIV (including AIDS). This represents 22 percent of the SC total. Of these, 3,120 were men and 1,455 were women. Most people (2,547) were ages 50 and over; 865 were ages 40-49; 808 were ages 30-39; 333 were ages 20-29; and 22 were children and teens under 20 years of age.

As with new infections, African Americans are disproportionately impacted. Most of the people living with HIV in the Pee Dee Public Health Region were African American men (44 percent), 19 percent were White men, 24 percent were African American women, and six percent were White women. Six percent of people living with HIV were Hispanic/Latino (men & women).

Of 3,279 people living with HIV who reported a risk, 55 percent reported a risk of men who have sex with men; followed by men and women exposed through heterosexual sex (33 percent); people who inject drugs (eight percent); and the combined risk of men who have sex with men and people who inject drugs (three percent).

SC HIV Prevention Program Priority Populations

Care, treatment, and prevention services for people living with HIV are a top priority for the State of South Carolina's HIV Program.

Among remaining priority populations for HIV prevention services:		
SC HIV Prevention Program Priority Populations ^(1,2)	2023/2024 Diagnosed HIV Cases by Population % of Total Cases w/Risks Identified (169 Total) *	People Living with HIV, 2024 By Population % of Total Cases w/Risks Identified (3,364 Total)
2. African American MSM	46%	30%
3. African American WSM	0%	16%
4. African American MSW	1%	8%
5. White MSM	17%	16%
6. IDU	7%	8%
7. ♦Hispanic/Latino ³	21%	8%

*Caution: Due to small numbers, recent case proportions must be interpreted with caution.

NOTES:

1. Populations: MSM = Men who have Sex with Men; IDU = Injection Drug User; WSM = Women who have Sex with Men; MSW = Men who have Sex with Women.
2. Priority Populations are a subset of the Epi Profile data and are not directly comparable to incidence and prevalence counts/percentages.
3. Ethnicity, in and of itself, is not a risk factor for HIV; however, in the context of Priority Populations, Hispanic/Latino is included as a 'Risk' for reporting purposes.
