Introduction

This is Volume III in the Annual Vital Statistics Series produced by the South Carolina Department of Health and Environmental Control (SCDHEC). Teen pregnancy events in the lives of South Carolina residents over the past decade are documented in this volume.

Since 1994, SC teen pregnancy data has been presented for four commonly requested age groups of adolescents: 10-19, 10-14, 15-17, 18-19 and the traditional 14-17.

The Office of Public Health Statistics and Information Services (PHSIS) collects data on pregnancy events (live births, abortions and reportable fetal deaths). South Carolina law requires this data to be reported to SCDHEC; therefore the statistics presented should be representative of live births, abortions, and fetal deaths that occur among SC residents.

In this report, reported pregnancies are defined as the number of live births plus the number of abortions plus the number of reportable fetal deaths.

Reported pregnancies = live births + abortions + fetal deaths

Reportable fetal deaths are defined as fetal deaths that meet the criteria of 20⁺ weeks gestation (length of pregnancy) and/or fetal weight of 350⁺ grams.

The Office of Research and Statistics (ORS) and National Center for Health Statistics provide population estimates. Inter-censal population (1998-1999, 2001-2008) should be recognized as estimates. The 2000 population is based on census data.

¹ Reported pregnancies equal total live births plus abortions plus fetal deaths

² Abortion statistics contain out-of-state (O-O-S) abortions

³ Reported Pregnancies, Live Births and Abortions: Rates calculated per 1,000 female population
Fetal deaths: Rates calculated per 1,000 live births plus fetal deaths

⁴ Live Births to Unmarried Mothers, Percentage represents percent of all live births to unmarried females age 10-14

* Race may not sum to total due to unknown races.

Definition of Terms

Abortion: Purposeful termination of pregnancy with intention other than to produce a live born infant or to remove a dead fetus.

Age of Mother: The age of the mother in years at her last birthday.

Reported Pregnancy: The number of live births plus the number of abortions plus the number of reportable fetal deaths.

Fetal Deaths: Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction, the fetus does not breath or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles. A fetal death is required to be reported if the fetus has completed the twentieth week or more of gestation or weighs 350 grams or more. **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

Live Birth: The complete expulsion or extraction of a product of human conception from its mother, irrespective of the duration of pregnancy, which after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

Marital Status:

Unmarried: A woman who has never been married or who has been widowed or legally divorced in excess of 280 days.

Married: A woman who is married or has been married within 280 days from conception.

Paternity Acknowledgement: Gives authorization to list the name of the father by means of an affidavit as required by South Carolina Law, Section 44-63-165. For statistical purposes, paternity acknowledgements are included in the unmarried category.

Residence Data: Data allocated to the place in South Carolina where the person normally resides, regardless of where the event occurred.

Interpretation of Data

Rate Calculations with Small Numbers: There are variations in all statistics, which are the result of chance. This characteristic is of particular importance in classifications with small numbers of events where small variations are proportionately large in relation to the base figure.

Race: Information on race of the mother and father is reported on birth and fetal death certificates, and the race of the woman is reported on the abortion form. For statistical purposes, the tables in this report are based on the classification of "White" and "Black and Other". Blacks currently make up 95 percent of Black and Other Population of South Carolina. To be consistent with the National Center for Health Statistics (NCHS) and with other states, the Office of Public Health Statistics and Information Services of the South Carolina Department of Health and Environmental Control began utilizing the race of the mother for births in 1990. Abortions and fetal deaths are characterized by the race of the woman for all reported years.

Fetal Death Rates: Beginning in 1993, the fetal death rate calculations were changed to the formula recommended by NCHS, which includes fetal deaths plus live births in the denominator. Due to this change, the rates reported in this series will not be identical or comparable to rates reported in previous volumes.

POPULATION DATA: For inter-census years, the National Center for Health Statistics provide estimated population data for South Carolina for five-year age groups. Based on the assumption that the population within each of these age categories is distributed uniformly throughout the age interval, the population for females 14-17, 15-17 and 18-19 years is derived, respectively, as follows: 20% of the female population 10-14 years plus 60% of the female population 15-19 years, 60% of the female population 15-19, and 40% of the female population 15-19. For this publication, the 2000 population data are determined in the same manner as the estimates, thereby, providing a consistent method of deriving population information for these age groups over time. The population data presented in the tables are rounded to the nearest 10.

Beginning with the 2000 Census, population information released by the U.S. Census Bureau contained a 'multiple' race category. In order to provide rates by single race category for vital events, the National Center for Health Statistics (NCHS) developed a 'bridging' methodology that would regroup the populations of the 'multiple' race category into standard single race categories. Beginning with 2002, these 'bridged' estimated population data were available for South Carolina. For a description of these methodologies, please refer to the 'Technical Notes' Section of the corresponding annual publication of the South Carolina Vital and Morbidity Statistics, Volume I.

Formulae

Reported Pregnancy Rates

$$\frac{\text{Number of pregnancies (specific age group)}}{\text{Total population of females (specific age group)}} \times 1000$$

Live Birth Rate

$$\frac{\text{Number of live births (specific age group)}}{\text{Total population of females (specific age group)}} \times 1000$$

Abortion Rates

$$\frac{\text{Number of abortions (specific age group)}}{\text{Total population of females (specific age group)}} \times 1000$$

Fetal Death Rates

$$\frac{\text{Number of fetal deaths (specific age group)}}{\text{Total number of live births plus fetal deaths (specific age group)}} \times 1000$$

Percent of Births to Unmarried females

$$\frac{\text{Number of live births to unmarried females (specific age group)}}{\text{Total number of live births to females (specific age group)}} \times 100$$
