**Surgical Site Infection (SSI) Standardized Infection Ratio by Procedure**

**Data Collected: 01/01/2017 - 06/30/2017**

<b>Procedure</b>	<b>No. of Specific Procedures Performed <sup>a</sup></b>	<b>No. of Infections</b>	<b>No. of Predicted Infections</b>	<b>Standardized Infection Ratio (SIR)</b>	<b>95% Confidence Interval</b>
Colon Surgery	2	*	*	*	*

Abdominal Hysterectomy	44	1	0.26	*	*
Knee Prosthesis (Replacement)	129	0	0.58	*	*

a. \*= Too few procedures. Reporting on too few procedures is a risk to patient confidentiality and data stability. If less than twenty surgical procedures are performed, the SIR and number of infections will be suppressed until more procedures are performed.

**Central Line Associated Blood Stream Infection (CLABSI) Standardized Infection Ratio (SIR)**

**Data Collected: 01/01/2017 - 06/30/2017**

<b>Location<sup>a</sup></b>	<b>No. of Central Line Days<sup>b,c</sup></b>	<b>No. of Infections</b>	<b>No. of Predicted Infections</b>	<b>Standardized Infection Ratio</b>	<b>95% Confidence Interval</b>

a. The specific patient care area in which a patient is assigned while receiving care in the healthcare facility. All adult and pediatric critical care units are combined into one SIR; all adult and pediatric inpatient wards are combined into one SIR for this report.

b. Central line days are the total number of days a central line is in place for all patients in selected hospital locations.

c. \* = Too few central line days. Reporting on too few central line days is a risk to confidentiality and data stability. If there are less than fifty central line days, the SIR and number of infections will be suppressed until there are more central line days to report.
