

Geographic Spread

South Carolina reported **sporadic activity** this week.

Influenza Activity

Overall, there was an increase in influenza activity this week.

Regional Influenza Activity

Increased

No change

No change

Decreased

Virologic Surveillance

This week **2** lab-confirmed tests were reported. In the current flu season, there have been **6710** lab-confirmed tests reported.

Influenza-Like Illness Surveillance

The percent of patient visits to sentinel providers for an influenza-like illness (ILI) was **1.7%**, which is **below** South Carolina's baseline (**3.6%**). The ILI activity level overall was **minimal**.

Influenza-Associated Hospitalizations

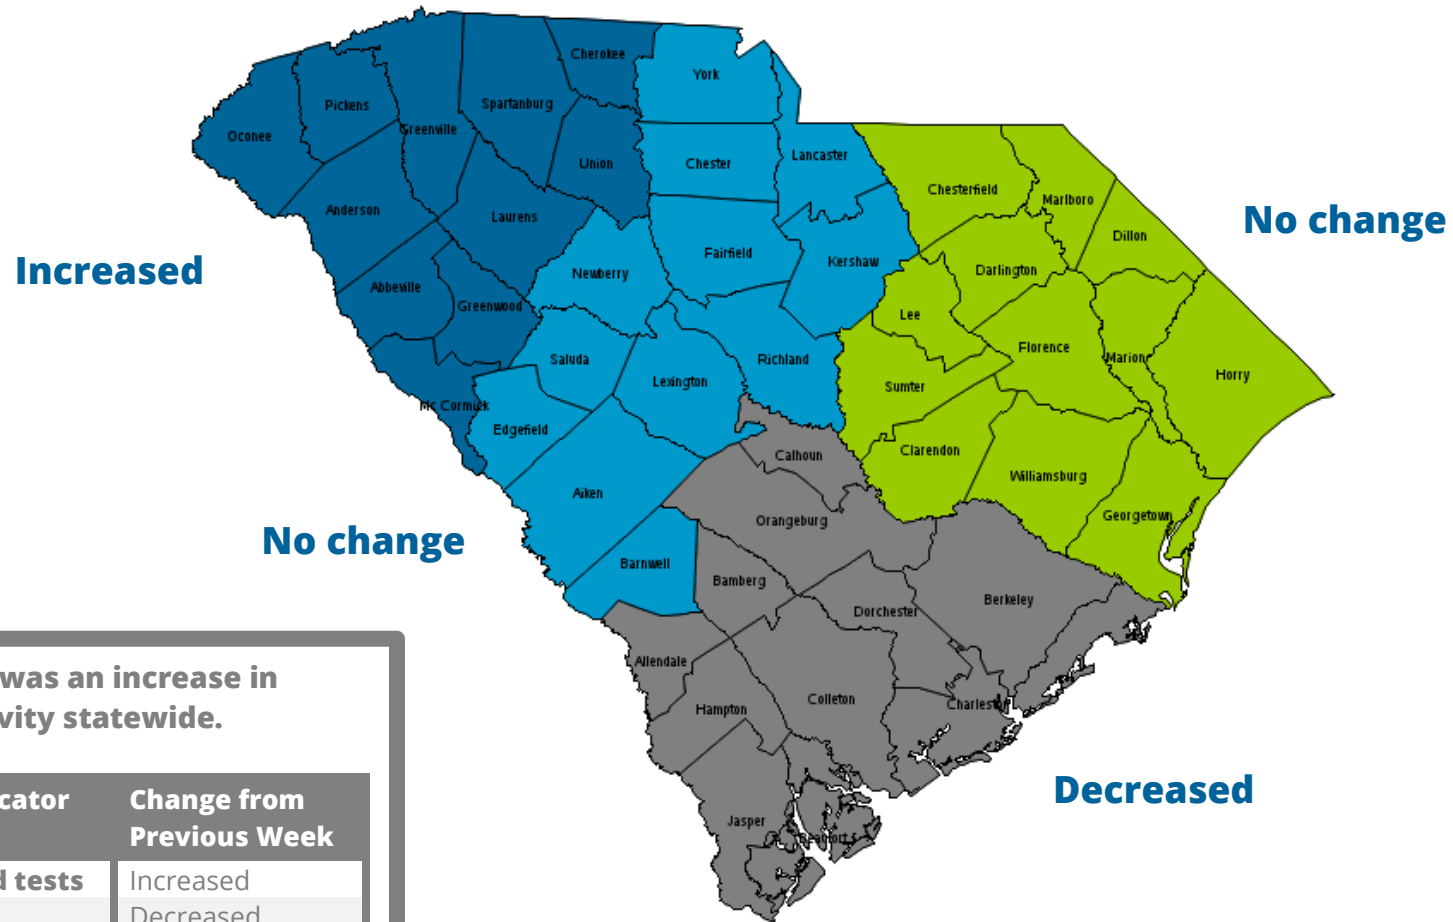

This week **11** influenza-associated hospitalizations were reported by **41** hospitals. The cumulative hospitalization rate is **58.3 per 100,000**. In the current flu season, there have been **2965** influenza-associated hospitalizations.

Influenza-Associated Deaths

This week **0** influenza-associated deaths were reported. The cumulative mortality rate is **2.5 per 100,000**. In the current flu season, there have been **126** influenza-associated deaths.

Influenza Activity*

In the 4 Public Health Regions, activity showed...

Overall there was an increase in influenza activity statewide.

Influenza Indicator	Change from Previous Week
Lab-confirmed tests	Increased
ILI Percent	Decreased
Hospitalizations	Increased

*Indicators for assessing influenza activity include: lab-confirmed tests, ILI percent, and hospitalizations.

Virologic Surveillance

Lab-Confirmed Influenza Cases by Influenza Type To Date*					
Influenza Type	This Week	No. of Cases (%)			5 season average
		2019-20	2018-19	2017-18

*NS - not subtyped *LND - lineage not determined

*Data presented from previous influenza seasons represents the data from that season through the same week as the current season. Nationally, the influenza season begins with MMWR week 40 and ends with MMWR week 39. The 2019-20 influenza season began on September 29, 2019 and will end on September 26, 2020.

**Cases with more than one influenza A subtype in the same sample or influenzas A and B in the same sample simultaneously.

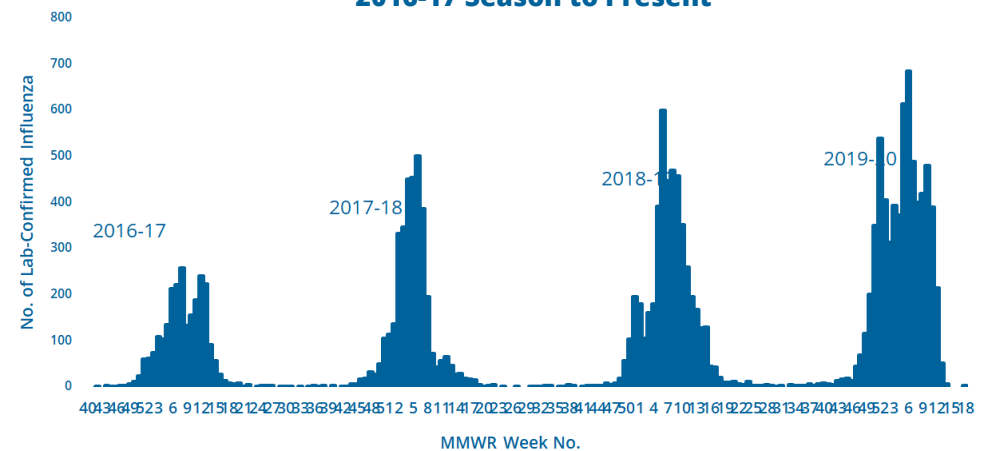

Laboratory-Confirmed Influenza Cases, by Virus Type

Week ending 5/2

Cumulative

Laboratory-Confirmed Influenza Cases, 2016-17 Season to Present

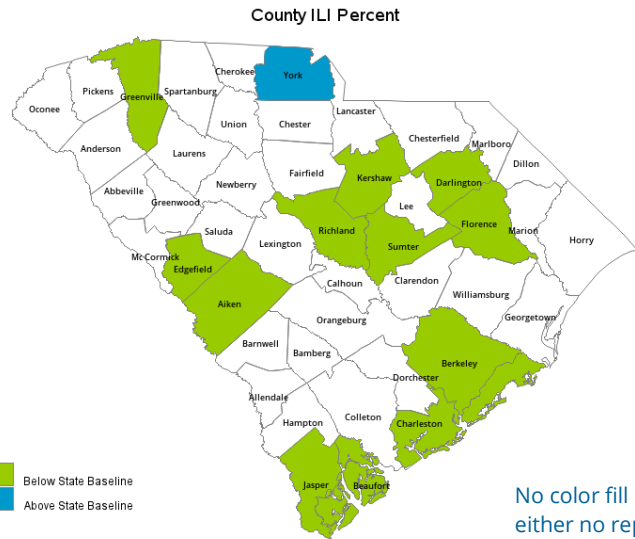

Influenza-Like Illness Surveillance

This week, the ILI activity level was **minimal** and **1.7%** of patient visits to SC ILINet providers was attributed to an influenza-like illness. This is **below** the state baseline, **3.6%**.

Reports were received from providers in **13** counties, representing all DHEC Public Health regions.

ILI percentage is dependent upon the number of reporting providers and/or can vary by disease activity or the number of providers submitting reports.

Percentage of Influenza-like Illness (ILI) Visits Reported by Sentinel Providers for Past and Current Seasons

No color fill indicates either no reporting or does not participate.
