

New HIV infections (including AIDS cases), 2020-2021

Lowcountry Public Health Region includes eleven counties: Allendale, Bamberg, Beaufort, Berkeley, Calhoun, Charleston, Colleton, Dorchester, Hampton, Jasper, and Orangeburg.

HIV in the Lowcountry Public Health Region (PHR) For the two-year period 2020-2021, 323 people were newly diagnosed with HIV. This represents 23 percent of the total cases diagnosed in South Carolina.

By gender, 80 percent of new HIV/AIDS cases were men; 20 percent were among women.

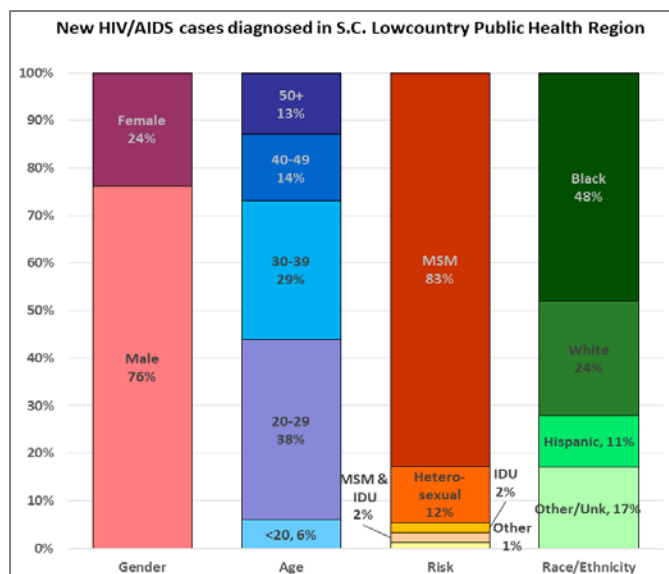

By age, the majority of new HIV/AIDS cases were among people ages 20-29 (38 percent), 29 percent were among people age 30-39, 14 percent were among people age 40-49, and 13 percent were age 50 and up. Six percent of new cases were under the age of 20.

By risk, among the 220 people who reported a risk, men who have sex with men (MSM) represent the largest proportion of recent infections (83 percent), followed by those indicating heterosexual sex as their exposure to HIV (12 percent); two percent reported Injection drug use (IDU); and two percent were the combined risk of MSM and IDU.

By race/ethnicity, among people newly diagnosed with HIV/AIDS in the Lowcountry PHR, 48 percent were African American; 24 percent were white; and ten percent were Hispanic. In 2020-2021, African Americans had 2 times the cases than whites in the Lowcountry PHR.

Among women recently diagnosed with HIV/AIDS in the Lowcountry PHR, most were African American (50 percent); 22 percent were White; and six percent were Hispanic. Of the 25 women reporting risk, 80 percent indicated heterosexual sex as their exposure to HIV; 12 percent reported IDU. Eight percent reported other as their exposure to HIV.

Among men recently diagnosed in the Lowcountry PHR, 46 percent were African American; 24 percent were white; and 12 percent were Hispanic. Of the 195 men reporting risk, 94 percent were men who have sex with men, three percent were exposed through heterosexual sex; one percent reported Injection drug use; one percent were both MSM and IDU.

Total People Living with HIV/AIDS through December 2021

As of December 2021, there were 4,637 residents of the Lowcountry Public Health Region living with a diagnosis of HIV (including AIDS). This represents 23 percent of the S.C. total. Of these, 3,379 were men and 1,258 were women. Most people (2,284) were ages 50 and over; 793 were ages 40-49; 998 were ages 30-39; 491 were ages 20-29; 71 were children and teens under 20 years of age.

As with new infections, African Americans are disproportionately impacted. Most of the people living with HIV in the Lowcountry Public Health Region were African American men (38 percent), 19 percent were White men, 16 percent were African American women and four percent were White women. Seven percent of people living with HIV were Hispanic/Latino (men & women).

Of the 3,667 people living with HIV who reported a risk, 60 percent reported a risk of men who have sex with men; followed by men and women exposed through heterosexual sex (29 percent); Injection drug use (six percent); and the combined risk of men who have sex with men and Injection drug use (four percent).

S.C. HIV Prevention Program Priority Populations

Care, treatment and prevention services for persons living with HIV/AIDS are a top priority for the State of South Carolina's HIV Program.

Among remaining priority populations for HIV prevention services:		
S.C. HIV Prevention Program Priority Populations ^(1,2)	2020/2021 Diagnosed HIV/AIDS Cases by Population % of Total Cases w/Risks Identified (229 Total) *	People Living with HIV/AIDS, 2021 By Population % of Total Cases w/Risks Identified (3,848 Total)
2. African American MSM	38%	28%
3. African American WSM	5%	12%
4. African American MSW	0%	6%
5. White MSM	19%	17%
6. IDU	2%	6%
7. ♦Hispanic/Latino ³	16%	8%

***Caution: Due to small numbers, must interpret recent case proportions with caution.**

NOTES:

1. Populations: MSM = Men who have Sex with Men; IDU = Injection Drug User; WSM = Women who have Sex with Men; MSW = Men who have Sex with Women.
2. Priority Populations are a subset of the Epi Profile data and are not directly comparable to incidence and prevalence counts/percentages.
3. Ethnicity, in and of itself, is not a risk factor for HIV; however, in the context of Priority Populations, Hispanic/Latino is included as a 'Risk' for reporting purposes.
